

To whom it may concern:

This is a letter telling you about our experience with Baywest Industries Ltd. and how it relates to our store operations. After sitting and meeting with Baywest President David Gibson we were looking forward to having this unit installed for our walk in cooler unit. The installation was seamless with no interruption to our normal daily routine. BaywestAir worked closely with my refrigeration team to ensure all sides were educated and that the install would go smoothly which it did.

We have now had the unit for a year and have noticed the following differences:

- 1) Cost savings on our utility bill.
- 2) Increasing the life span of current equipment.
- 3) The security of the unit ALWAYS being monitored.

We love the fact of saving money and also increasing the life on our compressor in the walk-in unit as now for many weeks and potentially months we are using the fresh outside air to cool our product. Also the security in having the unit be monitored for temperature changes has saved us on more than one occasion. This immediate action to a cooler problem has not only notified us, but directly to the refrigeration company to help save us from wasting product and ensuring that the guest receives safe food.

Any questions about the installation or general inquires please do not hesitate to contact me at (780)974-2038 or on my E-mail at housworth@shaw.ca

Yours Truly,

Troy Housworth
